

REAR LED AND BRAKE WARNING

A TRUE AUTOMATIC BRAKE WARNING

This accessory for bike or e-scooter is more than a simple LED projector. Placed at the back of your equipment, it signals your presence but also has the function of a brake warning device! Inform motorists around you, as with a STOP light on a car. When you are in motion, the LED is lit according to your choice between the flashing modes.

When you brake, the sensors placed inside the LED perceive the stop of the movement and LED lights up at high intensity for 3 seconds to signal the braking.

Equipped with a silicone clip, the installation of this accessory is simple and universal. Recharge the LED with the included micro USB cable.

Signal yourself and ensure your safety

REAR LED AND BRAKE WARNING

Characteristics

Product dimensions (WxDxH) in cm:
Diffusion angle: 180°
Autonomy: Up to 54 hours
Battery capacity: 3,7V - 350 mAh
